TECHNICAL SKILLS

Languages: Java, JavaScript, Python, Kotlin

Frameworks: Spring Boot, React, Vue, Quasar, JavaServer Faces (JSF)

Data & Messaging: Kafka, Flink, GraphQL, PostgreSQL, Oracle, MongoDB, SQL

Tools & Monitoring: Datadog, SmartBear, jPOS, AWS, GCP, Docker, Kubernetes, Openshift

PROFILE

I'm a software developer with 6+ years of experience building highly scalable, high-performance systems in the financial sector in Mexico. My core expertise is in Java, complemented by hands-on experience with several other languages, including JavaScript, Python, and Node.js. I enjoy working on end-to-end solutions, ensuring each individual component is built to its full potential — most recently applying this mindset to event-driven applications using Kafka and Flink to improve transaction ingestion and processing.

WORK EXPERIENCE

Servicios Electrónicos Globales 2024 - PRESENT

Tech Lead

- Led technical projects in the banking sector with a strong focus on process rigor and comprehensive documentation, given the industry's high compliance standards
- Managed and maintained detailed documentation for all system components, including code, databases, user access, and servers
- Implemented, managed, and maintained development, QA, and pre-production environments, ensuring each operated optimally and aligned with project requirements
- Led a major initiative to build Kafka-integrated solutions for near real-time transaction reception and storage
- Developed core components in Spring Boot and jPOS to enable near real-time communication between systems
- Broadened expertise in the administrative side of software leadership and gained deep exposure to banking system operations
- Collaborated with cross-functional and cross-disciplinary teams across the project lifecycle

EDUCATION

2018 - 2022

Ingeniería en Desarrollo y Gestión de Software

Universidad Tecnológica de Emiliano Zapata, Morelos

LANGUAGES

- Spanish (native)
- English (C2)

EXOS Technology 2024

Tech Lead

- Led technical projects in the banking sector with a strong focus on process rigor and comprehensive documentation, given the industry's high compliance standards
- Managed and maintained detailed documentation for all system components, including code, databases, user access, and servers
- Implemented, managed, and maintained development, QA, and pre-production environments, ensuring each operated optimally and aligned with project requirements
- Led a major initiative to build Kafka-integrated solutions for near real-time transaction reception and storage
- Developed core components in Spring Boot and jPOS to enable near real-time communication between systems
- Broadened expertise in the administrative side of software leadership and gained deep exposure to banking system operations
- Collaborated with cross-functional and cross-disciplinary teams across the project lifecycle

EXOS Technology 2021- 2023

Junior Fullstack Development

- Transitioned from QA to development, bringing a user-centric mindset that enhanced feature design and reduced post-release issues.
- Developed and maintained web applications using Java Server Faces, Vue.js, and JavaScript, delivering solutions tailored to the banking sector.
- Built robust APIs, batch processes and microservices with Java, Spring Boot, Node.js, and GraphQL, ensuring seamless integration across platforms.
- Implemented near-real-time streaming applications with Apache Kafka, enabling efficient processing of high-volume financial data.
- Actively optimized application performance and security, applying best practices to meet the rigorous demands of financial services.

EXOS Technology 2020 - 2021

Junior QA Tester

- Started my career in Quality Assurance, testing software I would later go on to develop myself

- Implemented SmartBear as a test automation tool, streamlining the QA process and improving test coverage
- Authored user manuals and documentation for test cases and test matrices
- Gained a user-driven perspective on development, learning to anticipate potential issues and identify improvement opportunities early in the design phase

Freelancing Projects 2020 - PRESENT
Colegio Brimmer

- Designed and built the Colegio Brimmer website from scratch using Vue, Vite, and JavaScript.
- Developed responsive front-end layouts to provide a consistent experience across desktop and mobile devices.
- Collaborated with teachers and school administrators to gather requirements and shape the website’s design and content.
- Turned stakeholder feedback into clear, user-friendly pages presenting the school’s information and programs.
